

Choosing a winter cover for your swimming pool

advice sheet

Practical and technical advice

For winter pool covers

- ▶ The winterizing cover completely covers your swimming pool (deck coping included), protecting it against debris, leaves, insects, accidental immersion of animals, etc.
- ▶ Do not use the winter cover as a summer cover, because the high summer temperatures would risk damaging the material.
- ▶ The cover is not designed to be walked upon.
- ▶ During the winter period, remember to check the attachment of the cover and pull it taut if it becomes slack.
- ▶ At the end of the winter season, clean the cover in clean water, dry it and stow it in a clean and dry place (COVMISSAC = storage bag).
- ▶ Our covers are fabricated with an overlap corresponding to standard 32 cm deck coping. If you have non-standard deck coping, please specify this to us.

What model of cover should you choose ?

Sealed covers

- ▶ Biset: Budget-price sealed cover. Ensures good water quality. Not recommended for pools of over 50 m² or exposed to strong winds. 1-year WARRANTY. Colour blue.
- ▶ Alysée Standard: Sealed cover giving excellent value for money. It is both watertight and airtight (and therefore dust-tight), which means your pool water is still perfectly clear at the end of the wintering season. It prevents UV light from penetrating and therefore the risk of photosynthesis (by algae). For pools of over 80 m², make a grid on the underside of the cover with supporting straps (SANGLCLIC) or choose the Alysée Luxe cover model with straps and dynamometric springs that keep the cover under greater tension. 4-year degressive WARRANTY. Colour blue or green.
- ▶ Alysée Luxe: Top-of-range sealed cover. It has the same features and qualities as the Alysée, plus straps and dynamometric springs that keep the cover under greater tension. 4-year degressive WARRANTY. Colour blue or green
- ▶ Solid water bag cover: Opaque cover in 75/100 liner material with heat-welded bags fitted with valves for filling with water. Weight about 1 kg/m². Choice of colours from the range of available single-colour 75/100 liners. Ensures excellent water quality when the pool is put back into service after winter. 2-year degressive WARRANTY against any manufacturing defect.

Net covers

- ▶ Mistral Net: Budget-price filtering cover. Protects the pool against leaves and debris. Ideal for protecting automatic covers. 2-year degressive WARRANTY. Colour blue or green.
- ▶ Mistral Super Luxe and Super quadri Net: Top-of-range filtering covers. They have the same features and qualities as Mistral Net, plus straps and dynamometric springs that keep the cover under greater tension. Ideal for pools exposed to wind, heavy rainfall and snow. Mistral Super Luxe: 3-year degressive WARRANTY. Mistral Super quadri: 4-year degressive WARRANTY. Colour blue or green.
- ▶ Tramontane Net: Top-of-range filtering cover with a very tight weft that ensures better protection against dust. Its straps and dynamometric springs keep the cover under greater tension. Protects the pool against leaves and debris. Ideal for very windy regions. 4-year degressive guarantee. Colour blue.
